

Lab and Capstone Submission Guidelines

Experimentation, A/B Testing and Causal Inference (SDA-DSC-213), SDAIA Academy. For participants.

Where to submit

All work is submitted through the Submission Form, a one-screen page that works on a phone or laptop. Scan the QR code or open the link:

https://script.google.com/macros/s/AKfycbxRWd-8M6xZwnQAcfahEtKXGc7npJiY0S7-BKjZu58KB6ukPWB1BFaQH2m0xUEoRmx_A/exec

No Google account is needed. Submit once per lab and once for the capstone. If you need to resubmit before the deadline, submit the form again; the latest submission counts.

What to submit

Item	Due	Files	Naming
Lab 1: Potential outcomes	End of Day 1	The completed notebook	<ID>_Lab1.ipynb
Lab 2: A/B test end to end	End of Day 2	The completed notebook	<ID>_Lab2.ipynb
Lab 3: Four estimators	End of Day 3	The completed notebook	<ID>_Lab3.ipynb
Lab 4 and capstone	End of Day 4, before the exit exam	Notebook plus the two-page decision memo (PDF)	<ID>_Capstone.ipynb , <ID>_Memo.pdf

<ID> is your participant ID, which is your 10-digit national ID number (for example 1234567890_Lab1.ipynb). Run the notebook top to bottom (Kernel, Restart and Run All) before saving so that every output is visible; a notebook with no outputs is graded as incomplete. Keep the notebook self-contained: it must run from the `labs/starter/` folder of the course repository with the data in `labs/data/`, with no extra files.

How labs are graded (30 percent of the course grade)

Each lab is scored out of 100 and the four are averaged.

Criterion	Points	What earns full marks
Correctness	50	Every TODO completed; estimates, standard errors and diagnostics match the expected values within seed noise; no silent errors
Interpretation	30	Each result is followed by a short written reading in the markdown cells: what the number means, which assumption it rests on, and what you would decide
Code quality	20	Uses the course helpers where provided, readable variable names, no dead cells, runs top to bottom without manual steps

How the capstone is graded (40 percent of the course grade)

Scored out of 100 with the rubric from the Day 4 handout: estimand and question 15, identification and design 25, estimation and inference 25, diagnostics and sensitivity 20, communication and decision 15. Pass at 70, distinction at 90. The memo is two pages: decision, estimand, design, estimate with interval, diagnostics, sensitivity, recommendation with the risk stated. The defense is a five-minute presentation on Day 4 Hour 4.

Deadlines and integrity

Submissions close 30 minutes after the end of each day; the capstone closes before the exit exam starts. Late work loses 10 points per day. You may discuss approaches with other participants, but the code and the memo you submit must be your own; identical notebooks are flagged and both receive zero for that lab.
